Innovative recycling

resaco

...to support your business

RESACO & RECYKLON HISTORY

Our group's history began 20 years ago by establishing the Recyklon company. Since its beginning, it dealt with recycling plastics. However, over the years we became specialists mainly in the field of processing LDPE films. Years of experience and gaining knowledge in this industry had an impact on making the decision to combine recycling with the production of bags and film. The concern to recycle LDPE and HDPE raw materials and reuse them in production became our priority. It was also responsible for the establishment of the Resaco company in 2013, which continues the production of films and bags. From that point, both companies have entered a phase of extremely dynamic development, which continues to this day.

RESACO

PRODUCTION OF FILM AND BAGS

We have been involved in professional production of high-quality bags and films for many industries, including: commercial, furniture, construction, as well as many others. We are a company with many years of experience. We perfectly understand the market requirements, customer needs and expectations, as well as commonly accepted and required quality standards. What distinguishes us from the competition is the fact that the films produced at Resaco are based on an ecological mixture of raw materials.

While working on achieving the mixture's optimal composition, we've carried out many technological trials, allowing to create a product that will respond to the customer's needs in 100%. Our composite film does not lose its properties over time, and therefore it remains resistant to tearing and punctures for years.

RESACO PACKAGING

ASSESSMENT OF THE IMPACT ON THE ENVIRONMENT

We engage in helping to make aware packaging choices. For this purpose, Resaco products have received an environmental impact assessment - each product possesses a positive assessment of recyclability. Our plastic packaging comes 100% from recycled materials.

In our daily activities, we value long-term cooperation based on equality and mutual trust. Thanks to the excellent technical parameters of our products and high-quality service, the group of our clients grows constantly and rapidly - we are currently operating on a national scale and successfully win over European markets.

The dynamic development of the Resaco company resulted in that today we are able to produce bags at the level of 7,200 tons per year. We focus on continuous development and innovation. A machine park including state-of-the-art devices constitutes the basis of our business. We use machines that shorten the order completion time as much as possible. Additionally, our production capabilities are also increased by many years of cooperation with trusted suppliers as well as unlimited access to raw materials from Recyklon.

RECYKLON

RECYCLING OF PLASTICS

Recycled raw material is supplied by our own company included in the capital group - Zakład Usługowy Recyklon Piotr Radosz Sp. z o.o. For more than 20 years now, it has been following new technologies in the field of recycling and processing of plastics.

Environmental awareness, the industry's development, and taking advantage of the latest technologies guaranteed achieving new quantitative thresholds, which today exceed 12,000 tons per year. A professional and experienced staff implements the company's main goal - providing clients with the highest quality LDPE regranulate. Only such a raw material can increase the global use of recyclates in the industry at the expense of primary raw materials. Closed circulation of plastics is primarily important in terms of the natural environment.

RECYKLON

ENVIRONMENTAL PROTECTION

- GOOD PRACTICES IN THE COMPANY

Recyklon collects waste in the form of film from specialized companies from all over Poland and some European countries, dealing with waste collection. It uses the film to produce regranulate which is used by Resaco to produce films and bags.

By producing film from recycled materials, we limit the use of our planet's natural resources. Such actions have a great impact on the environment and the life of future generations.

RECYKLON

RECYCLING OF PLASTICS CERTIFICATE

Recyklon is one of the few recyclers in Poland possessing the EuCertPlast certificate. Our technology of processing film waste into regranulate, production management, as well as procedures related to maintaining and controlling quality, have been recognized by an accredited body certifying as ecological compliant with European standards.

RESACO QUALITY DEPARTMENT

Each delivery of raw material and all production components are carefully analyzed. At this stage, all the properties of the components and their compliance with the specification and order are being verified. Any deviation from the accepted standards results in proper proceedings or returning the goods. Quality control also takes place during each stage of the production. We possess a large warehouse and production space. Each storage room is properly adapted and secured.

Our products - bags and film products - meet hygiene standards. We are certified by the National Institute of Hygiene. Furthermore, our products undergo laboratory tests which prove that their compositions are free from harmful elements. They can be subjected to the combustion process.

PRODUCTION SUPERVISION DEPARTMENT

The production supervision department determines work schedules as well as the order of performed orders. Production processes, conducted and issued timetables, as well as allocations are also being analyzed.

SALES DEPARTMENT

It is up to the sales department to provide support and information concerning the possibilities and products of the Resaco company. Our employees know the offered products and packaging methods perfectly well. They offer clients professional assistance in choosing the right product but also prepare an individual, attractive offer. Each inquiry is handled in a kind and professional manner.

PRODUCTION MINIMUM

We produce bags in any quantity. It all depends on the availability in terms of a given order quantity, e.g. packaging, and your choices. As an order quantity is higher the unit price becomes lower. The unit price depends on the quantity of the ordered product, the cost of the unit packaging, and the used raw materials.

PRODUCTION CAPACITY

We possess a rich and modern machine park based on reliable and efficient technology. We produce T-shirt, s-cut, and standard bags - rolled into a roll.

Our standard perforated bags are very durable, thanks to the use of a side or bottom weld – the so called "star".

The raw material used for production is recycled, processed, in a straw-color, or any other desired color. It is characterized by flexibility and high resistance to punctures.

T-shirt bags stand out with a high price-comfort of use ratio. Thanks to using "ears", the bag can be easily tied. This makes it easy to carry the bag and prevents waste from falling out.

High tensile, tear, and puncture strength of the film.

Possibility of producing bags from three-layer film and with fragrance additives.

Possibility of using biodegradable film.

Various colors and prints on the bags.

BLAUER ENGEL CERTIFICATE

At Resaco, we have successfully completed the activities related to receiving the Blue Angel certificate. This certificate informs the consumer about ecologically high-quality products and confirms that the selection in our range has been produced at LEAST 85% from recycling material.

CERTIFICATE

Resaco Sp.z.o.o.
75-202 Koszalin, Poland

is granted the right, on the basis of the contract on the use of the environmental label no. 37089 based on DE-UZ 30a Edition 2019, for the product

**Resaco Sp. z o.o. Film made from >85% post-consumer recycleate;
printed or unprinted, various formats, colours and thicknesses**

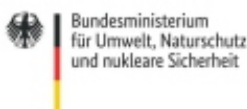

to use the Blue Angel Ecolabel shown below as a sign of special environmental friendliness.

OWN BRAND PRODUCTION

The first step consists in understanding the needs. In order to be able to meet the requirements of a given project, we ask for the details of the client's idea. Only then we are ready to start work, aimed at preparing a prototype. After preparing it, we can determine the estimated cost and order completion date. After accepting the final version of the product, we present the customer with a final valuation, and then we ask to sign a contract. It is only at this stage that the cooperation is formally established. The product will be ready within 1-2 months, depending on the availability of raw materials and packaging.

OUR PRODUCTS

Bags

BAGS FOR SELECTIVE WASTE COLLECTION

Bags for selective waste collection, for proper segregation of garbage. Divided into colors. Reliable and durable.

BAGS FOR CONSTRUCTION DEBRIS

Bags for construction debris are a must-have during renovation works. Our bags are durable and resistant to mechanical damage.

HOSPITAL BAGS

Hospital bags meet the highest quality standards. Intended for use at any medical facility.

TIRE BAGS

We produce bags for storing car tires that will protect them outside the season of use.

BAGS FOR PRODUCTION PLANTS

Bags for production plants are practical and economical due to the possibility of being filled completely.

WASTE BAGS

We offer high-quality waste bags that are characterized by both durability and flexibility.

GARBAGE BAGS

Garbage bags are characterized by high durability and flexibility. We produce bags in various sizes in a wide range of colors.

BAGS FOR FECES

We offer high-quality bags for feces that stand out with environmentally friendly solutions.

STANDARD BAGS

Standard size bags are available in our store. We produce them from the highest quality materials.

OUR PRODUCTS

BASE PRODUCTS

FILM HOODS

Film hoods are used to secure pallet cargo and protect against unfavorable weather conditions.

HALF-SLEEVES

Half-sleeves are perfect for protecting against damage and external factors, they work well in the food and chemical industry.

FILM SLEEVES

Film sleeves are a perfect protection for products stored in them. They protect them against external factors.

FILM TAPES

Film tapes can be used with any type of food. You don't have to worry about protection against external factors.

FILM INSERTS

Film inserts can be used to protect cardboard packaging. They are flexible, durable, and very easy to use.
